### Editorial

This new Journal of Clinical and Biomedical Investigation appears as an expression of the vertiginous and rapid advancements in worldwide in biomedical Sciences and Clinical Research. It will be an online indexed journal in major bibliographic databases and adhere to strict standards of editorial quality in a globalized academic scenario. Our main goal is to publish the most relevant original research and secondly to obtain the broadest possible visibility and the widest dissemination of their scientific contents. We will also publish preliminary research communications, review papers and postgraduate thesis and seminars highly recommended by their mentors or advisors.

We will adopt the peer review system and we ask to the

authors to send the address and email of three reviewers. The prestige of our journal will be measured by its impact factor and other recent emerging and alternative indicators of research performance.

Due to its complex nature modern biomedical research has become increasingly inter- and transdisciplinary and collaborative scientific work. Educational researchers should describe concepts, study design and methods in order to provide transparency, clarity, appropriate ethic guidelines, and a constructive and critical approach. In such a way we can obtain a modern and updated perspective that allows the readers interested to study in depth this emerging field of biomedical research.
